Importance: High

Jennifer,

Thanks for having me over. I'll let you know when I have some information, but in the short term here is the Ecology Shoreline photos site I was referring to:

<https://fortress.wa.gov/ecy/coastalatlus/tools/ShorePhotos.aspx>. Unfortunately the last photos are from 2006, and I am not sure the photos go deep enough to the south, but the water was clear. I certainly do not see any indication of a large meadow there but I cannot tell if the little bit of green is patchy eelgrass (I would guess not based on the distribution. It will be interesting to see.

John

Subject: Eelgrass Survey at Dungeness NWR

John,

Thanks for coming out to the Refuge this morning. We really appreciated the conversation about the eelgrass survey of the potential lease area as well as potentials for additional surveys and restoration.

We are looking forward to receiving your estimate for the lease area survey and any information on contracting that you are able to provide.

Let's hope that the contracting piece flows smoothly.

-jennifer
