Yes it is a contradiction. But I see some of the confusion. Stillman et al did not address aquaculture in Humboldt Bay let alone Dungeness. They are misrepresenting the paper and that is the main point - there are many of these types of misrepresentations in the Confluence report. They rely heavily on the Confluence report to show that aquaculture would have no- to beneficial-impact on wildlife in Dungeness Bay based on these types of misrepresentations. The best way to say this might be:

The Confluence report states that “Stillman et al’s (2015) observations in Humboldt Bay suggest that even 300+ acres of aquaculture activity may be having minimal or no impact on Brant” is misleading since Stillman et al did not address aquaculture in *Humboldt Bay*, and the majority of Brant and eelgrass are located in the South Bay (Moore et al 2004) while all aquaculture was located in the northern portion of the bay.

Does that clarify?

Hi Jennifer and Sue, here is my last question and then I think this is in good shape. It's about Stillman. First paragraph is from original document. Second paragraph is my adding that Stillman was not talking about Dungeness Bay. The last one is my question.

The Confluence report states that “Stillman et al’s (2015) observations in Humboldt Bay suggest that even 300+ acres of aquaculture activity may be having minimal or no impact on Brant” is misleading since Stillman et al did not address aquaculture, and the majority of Brant and eelgrass are located in the South Bay (Moore et al 2004) while all aquaculture was located in the northern portion of the bay.

ff

The Confluence report states that “Stillman et al’s (2015) observations in Humboldt Bay suggest that even 300+ acres of aquaculture activity may be having minimal or no impact on Brant” which is misleading since Stillman et al did not address aquaculture in Dungeness Bay^[BJ1]. The majority of brant and eelgrass are located in the South Bay (Moore et al 2004) while all aquaculture was located in the northern portion of the bay.

So if Stillman did not address aquaculture, why would the tribe say that he did? They say that he did address aquaculture (in Humboldt Bay) and that 300+ acres is fine. So, did the tribe misinterpret Stillman’s conclusions or misquote him? Because right now it’s a contradiction. One sentence says he did and one sentence says he didn’t. Perhaps a small point in the scheme of things, it’s just confusing for the reader.

Thank you!

[BJ1]I am pretty sure that Stillman does not address aquaculture at all

Hi Jennifer and Sue,

Take a look and see what you think. I can change anything if you like. This is such a solid document, you did such a nice job with a good tone.

Thank you,
Nicole
