Here's another thing I read again so you don't need to respond: the text states that the Stillman report is for Humboldt Bay and not Dungeness Bay. So, now I understand the issue!

I just re-read your reply and you did tell me who the request is going to: WA Dept of Ecology and Army Corps, who together issue one permit. The county will issue their permit based on the permit from DOE and ACOE.

Thanks, Sue, that clears things up!

Nicole

Hi Sue, no, I haven't heard from Jennifer yet, I think she is back on the 24th? Thank you so much for the reply. (I was teleworking yesterday and since it's early today, thought I'd write instead of call). I still want to make sure I have the involved parties right and who the tribe's permit request is going to.

- The Confluence report states that “Stillman et al’s (2015) observations in Humboldt Bay suggest that even 300+ acres of aquaculture activity may be having minimal or no impact on Brant” which is misleading since Stillman et al did not address aquaculture, [MN1] [TS2] and the majority of brant and eelgrass are located in the South Bay (Moore et al 2004) while all aquaculture was located in the northern portion of the bay.

[MN1] doesn't the reference say “300+ acres of aquaculture activity”?

[TS2]? An issue of the ‘report’ vs the paper? The main point is that Stillman did not address aquaculture. In fact, the two main uses (aquaculture & Brant/eelgrass) occur primarily in different parts of the bay.

One thing I'm still confused about is that Stillman *does* seem to address aquaculture (he says 300+ acres may have no impact) but then later in the paragraph it says he *doesn't* address aquaculture. If his reference about aquaculture is for a different location than the tribe wants or is he is not analyzing the effects in enough, we could note that in the response, that his "analysis" of aquaculture is for a different part of the bay or that he is not addressing the details of aquaculture, like setup, maintenance, on-foot access, or whatever. That way it doesn't sound like a contradiction.

Anyway, again, if these are little details that don't matter or are too in the weeds, we can ignore this. Thank you!

Nicole.

Oh, I will ask Charlie about timing of this.

Hi Nicole,

No, no, no - Thank You! The RD and Kevin are coming up on the 30th. I'm not sure how to prioritize this - do you know if Robyn has a preference on the # of days she is presented with background information prior to a trip? If Jennifer is out of commission, I'd defer to Charlie. He seems to be on top of these types of deadlines.

Best,
Sue

Hi Sue, thanks for the information. I looked at a few older documents about tribal oyster farming that we have here from a few years ago. Like you said, it's complicated and sounds a little contentious.

One more question: what is your timeline on this? Is there a date by which you guys want to get this to Robyn (or Charlie)? That'll help me prioritize.

Thank you,
Nicole

Hi there Nicole,

Not sure if Jennifer has been in touch, so I've answered your questions as best as I can. Its such a complicated topic, that I sometimes get the fine points wrong, but at the least we will have something to go on. Ask me any wildlife question and I'm on it! But I'm a bit in the weeds on the management aspects of this issue. Jennifer is away on fire training and Lorenz, our Deputy, who may know more is out removing creosote-covered logs from a few other refuges, so I guess I'm it.

We do not actually own the land where the farm is located, but hold it under a Easement from WA Dept of Natural Resources. We manage for Refuge purpose (as a preserve and breeding ground for native birds). The three entities that manage 2 permits are Clallam County which issues a Shoreline Development permit and the Army Corp of Engineers as well as WA Dept of Ecology which jointly manage Aquaculture permits in the state. The ACOE and DOE permit is the most pressing now, Clallam Co has put theirs on hold until the more specific aquaculture permit is issued.

I hope that helps! Feel free to call if you have any additional questions and I'll do my best,
Sue

Hi Jennifer, thank you and Sue for the responses. I have a few more questions and I hopefully got all of them highlighted in yellow so it will be easier to find them in track changes. If they are too "in the weeds" or if they are information that everyone involved will already know, you can feel free to delete. I'm just reading this as a layperson and trying to figure out the relationship between the tribe seeking permits from one or all three other agencies, yet the farming is conducted in Refuge waters – I think? It seems like adding the specific agency, or all three if that permit request goes to all three, will help clarify a few details.

So, you can also look at what I did. There's so much solid information here, I just wanted to help it stand out a little to Robyn (or whomever) to get all your points.

I am more than happy to change or finalize this, or whatever helps. It's great to learn about things going on at refuges! I hope you are enjoying the east coast!

Thank you,
Nicole
